

Lite-Site 15

QUICK DEPLOY CELL SITES

- ▶ *Simplifies zoning and permitting*
- ▶ *Accelerates system deployment*
- ▶ *Designed to meet construction deadlines*

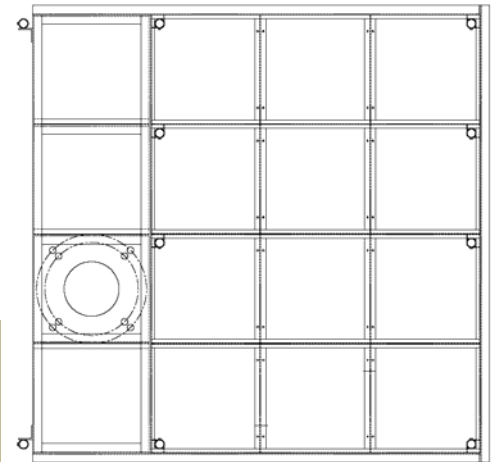

Lite-Site is:

- Pre-Engineered and Standardized
- Temporary or Permanent
- Above Ground Foundation for a Monopole

Up to a 115' monopole in a 15' square Compound!

Lite-Site can be installed:

- In One Day
- Without Disturbing the Soils
- On Blacktop or Crushed Gravel
- Without Specialized Tools or Equipment
- With Block or Poured Concrete Ballast

The patented **Lite-Site 15** is a self-contained wireless cell site. The **Lite-Site 15** is a modular system that consists of a structural steel base frame filled with concrete ballast that uses a standard monopole and antenna systems. The ballasted base frame creates a floor area that can be used to hold the monopole, equipment and a security fence. This unique product allows an entire cell site to fit in a 15' square compound.

The **Lite-Site 15** can minimize deployment time and overall site cost. In some instances a **Lite-Site 15** can be considered a temporary site and this fact can speed you through zoning and permitting.

All **Lite-Site** products can be PE Certified as permanent sites.
